

Peripheral arterial disease (PAD) is a treatable illness. When the arteries in your legs become clogged with fatty deposits, it can also indicate that you have an increased risk of having a heart attack or a stroke.

1 in 20 Americans Over 50 Have Peripheral Artery Disease.

Are You One of Them?

PAD symptoms include:

- Pain, fatigue and/or weakness in legs when walking
- Sores on toes, feet, or legs that won't heal
- Pain in the feet at night when sleeping

Come hear Interventional Cardiologist Eric Johnson, MD and Vascular Surgeon Keshav Pandurangi, MD talk about signs and symptoms of PAD, as well as the range of treatment options available to treat PAD and also reduce your risk of having a heart attack or stroke.

Thursday, November 5

6:30 to 8:00 pm
